ANALYSIS

Tools and techniques used for analysis

The collected information has been analyzed with the help of frequency tables, graphs and percentage.

Analyzing the 2025-26 Student Satisfaction Survey of overall institutional performance requires a systematic and scientific approach to converting student responses into quantifiable numbers for proper measurement and analysis. As the questionnaire includes a variety of questions, each associated with a different aspect of varying nature and scope, relating to the institution's overall performance in 2025-26, there is a need to devise a uniform scale for fair and appropriate comparison. For a systematic and scientific evaluation, the percentages of answers given by the students were reduced to a common scale for all questions by normalizing the data with a scale of 5 to 1 for options A to E. Therefore, the scale points for all questions is between 1 and 5. The following formula was used to calculate the score for a question.

$$Score = \frac{\text{Students response (\%)} \times \text{Scale of option}}{100}$$

$$\text{Sum of Score} = \sum \text{Score for each option}$$

After applying the above formula to all the questions, the score and their respective totals are as follows
